

SETUP

- Press back on battery cover tab
- Pull cover down to open.
- Insert 1 or 2 high quality 600mAh+ 9v batteries rated for high current electronics.
- Unit can run on 1 battery but 2 allows longer usage
- Push the U shaped tab until it clicks.

BACKGROUND

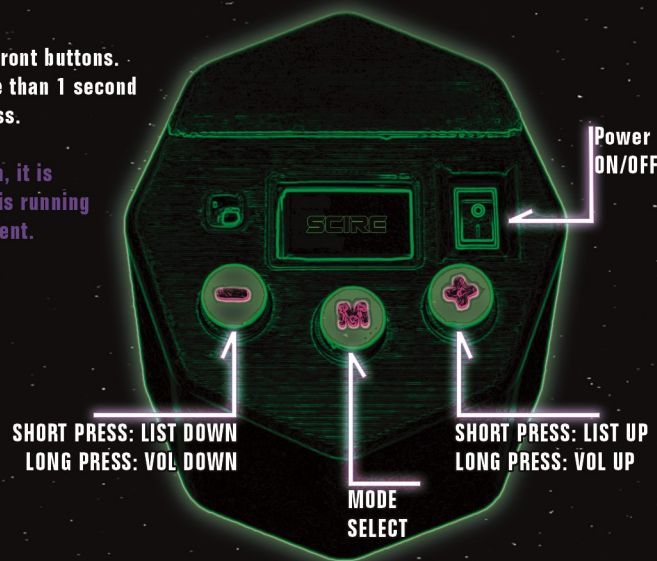

The Empath uses the environmental sensing algorithms from the AeroFlux, TAD and MagnoVex to identify potentially paranormal interactions and map them to structured responses. EMF was added to round out the sensor array and so the Empath could be used alongside EMF devices.

OPERATION

Each mode is controlled via the three front buttons. Pressing and holding a button for more than 1 second has a different effect than a short press.

If the Empath restarts during a session, it is likely that either the battery capacity is running low or it cannot deliver sufficient current.

Please replace the battery.

LIGHT COLOUR CHART

YELLOW (Flashing) - Put down mode
YELLOW (SOLID) - Baseline calibration
DEEP RED - TEMPERATURE INCREASE
DEEP BLUE - TEMPERATURE DECREASE

AMBER - AIR PRESSURE FLUCUATION
CYAN - MAGNETIC FIELD SPIKE SOUTH
MAGENTA - MAGNETIC FIELD SPIKE NORTH
WHITE - EMF FIELD FLUCTUATION

MODES

→ CALIBRATION

The Empath will light up solid yellow whilst establishing a baseline for future readings. Avoid movement of the device.

→ PLEASE SELECT MODE

Choose a mode with the M button. After 10 seconds, "They choose the subject" is selected.

→ HOW ARE YOU?

Responses are focused on finding out what is the emotional state of the interaction. Questions such as "How did it make you feel when" or "What drove you to make the decision to" are good ways to get responses without being too direct.

→ TELL ME SOMETHING ABOUT YOU

Reponses are focused on specific information that the communication might provide. Questions such as "I hear there was a lot of hard work done here, what positions were there?" or "What is your favourite part of this building" can get some specifics without interrogating.

→ IS THERE ANYTHING I SHOULD KNOW?

General responses which might be imparted to the person calling out, which might relate to the current time or even a message which is desired to be passed.

→ CLOSED QUESTION MODE

Both a Yes and No response are obtained by waiting for any of the sensors to detect an anomaly. After the Yes/No protocol is established, a scaled response is given depending on anomaly strength.

→ THEY CHOOSE THE SUBJECT

A mode which allows environmental interaction to pick the topic of calling out. If there are no responses within a 5 minute period, the Empath switches back to "They choose the subject" so another mode can be selected.

→ ENVIRONMENTAL SENSOR MODE

Shows all the environmental data used by the Empath. The light gives alerts as to when anomalies are detected. Pressing the plus or miinus button changes between Celcius and Farenheit
